Four New Cembranoids and Two Known Ones Isolated from the Soft Coral *Sinularia sp.*

Abstract

Four new cembranolide diterpenes (**1-4**), along with two known epimeric metabolites (**5** and **6**), have been isolated from the acetone extract of Formosan soft coral *Sinularia sp.*, collected at Dongsha Islands (東沙群島). Their chemical structures and configurations of these compounds were determined by spectroscopic techniques, including NMR (^1H NMR, ^{13}C NMR, ^1H - ^1H COSY, HMQC, HMBC, and NOESY) spectroscopy and 3D Chem Draw MM2 force field calculations.
